SUMMARY

AI/ML-focused Computer Science Graduate with hands-on experience in **full-stack web development**, database systems, and real-time **machine learning** applications. Passionate about **drone technologies**, **automation**, and **turning ideas into secure, user-centric digital solutions**

EDUCATION

Shri Ramdeobaba College of Engineering and Management (B-Tech) CSE(AIML)	(2026) Nagpur, India
- CGPA : 7.55 - Related Coursework: Data Structures & Algorithms, Computer Networks, Operating Systems, Database Management System, Machine Learning, Artificial Intelligence, Object-Oriented Programming	
Shankarrao Bande Art and Science College Warud 12 th : 80.67 %	(2022) Warud , India
NTR High-School Warud 10 th : 97.20%	(2020) Warud , India

SKILLS

- Programming Languages: Python, SQL, JavaScript, C, HTML, CSS
- Libraries/Framework: React.js, Node.js, Flask, NumPy, Pandas, TensorFlow, PyTorch, Scikit-learn
- Databases: MySQL, MongoDB , Prisma
- Tools/Platforms: , GitHub, Docker, VS Code, Jupyter Notebook, Tableau, RoboFlow

EXPERIENCE AND PROJECTS

UTMS Co-Founder and Software Lead BERAM Pvt. Ltd.	June 2025 – Present
Unmanned Multi-Drone Traffic Management System: Built a full-stack platform for autonomous multi-vehicle monitoring, mission routing, and automated flight execution using React, Node.js, Python, and MongoDB. Tenant-Aware Cloud Backend: Engineered a secure control plane enforcing role-based access control (RBAC), JWT authentication, and strict tenant isolation to prevent cross-tenant data leaks. MAVLink & Autopilot Integration: Integrated MAVLink/DroneKit with a Python/Flask worker to manage low-level vehicle commands (Takeoff, Waypoint Navigation, RTL, Land) and monitor critical autopilot states Real-Time Data Pipelines: Implemented persistent WebSocket connections to cache telemetry in memory on the backend and broadcast live updates (GPS, speed, altitude, battery) to the UI Interactive Flight Cockpit: Developed a geospatial mapping interface using Mapbox GL and Leaflet that allows operators to visually plan waypoints, monitor flight paths, and inspect pre-flight checklist status.	
LIMITUP.AI Gamified Self Improvement App (Link)	Feb 2026
AI-Powered Architecture: Engineered a gamified productivity platform that transforms goals into missions using a dynamic XP system and 20-level progression logic. LLM Integration: Leveraged Google Gemini AI to build a context-aware feedback engine with adaptive coaching personalities (Supportive, Strict, and Savage). Full-Stack & Real-Time: Developed a scalable backend using Node.js, Express, and Prisma with Real-time WebSockets for hands-free voice-based quest verification and call reminder feature via Twilio. Premium Frontend: Designed a mobile-first, glassmorphic UI using React 18 and Framer Motion, featuring complex micro-animations and social-ready progress sharing	

CERTIFICATIONS

Generative AI Engineering with LLMs Specialization (IBM) (verify)	2025
DevOps, DataOps, MLOps (Duke University) (verify)	2025
AWS Cloud Technical Essentials (AWS) (verify)	2023
Programming In Python (Meta) (verify)	2023
